

ZEHAO SHEN

Email: zehao_s@zju.edu.cn & Homepage: <https://ch-yu02.github.io/>

EDUCATION

Zhejiang University

Sept. 2023 – Jun. 2027 (Expected)

B.E. in Information Engineering, College of Information Science and Electronic Engineering

Overall GPA: 4.09/4.3

RESEARCH & INNOVATION EXPERIENCE

Taxonomy of LLM Reasoning Architectures

Jul. 2026 – Present

Nanyang Technological University, Singapore

Visiting Researcher | Advisor: Prof. Chau Yuen

- Designed and executed controlled comparisons of **Direct prompting**, **PAL**, **Zero-shot CoT** and **Self-Refine** across GSM1K, HARP, MATH-Perturb, and U-MATH, covering **3,608 unique problems** and over **28K evaluation records** under standardized model and repeat settings.
- Found substantial method–task interactions: Direct prompting outperformed PAL by **7.58 pp** overall, with the gap increasing from **1.61 pp** on GSM1K to **18.80 pp** on U-MATH; currently investigating how task characteristics influence the **relative effectiveness of different reasoning architectures**.

WirelessAgent++ Reproduction & Workflow Evaluation

Jul. 2026

Nanyang Technological University, Singapore

Visiting Researcher | Advisor: Prof. Chau Yuen

- Reproduced and extended the experimental pipeline of **WirelessAgent++**, evaluating modular agent operators, feedback mechanisms, and **MCTS-based workflow search** across **7 optimizer–executor configurations**, **1,412 unique problems**, and over **17K valid model evaluations**.
- Built a reproducible and auditable evaluation workflow with resumable execution, experiment manifests, API/token telemetry, and **partial-credit scoring**.
- Audited and improved the **WCHW scoring methodology**, identifying systematic issues that materially affected workflow rankings; validated the revised scorer on **5,728 previously generated outputs**.

Telecom AI Dataset Construction

Mar. 2026 – Jun. 2026

Zhejiang University, Hangzhou, China

Undergraduate Researcher | Advisor: Dr. Chongwen Huang

- Contributed to reasoning-data construction for **TelecomGPT-R1**, a telecom reasoning model trained on a corpus of over **158K examples**, with a focus on mathematical derivation and numerical computation problems.
- Built pipelines that convert technical sources into self-contained **problem–reasoning–answer** samples and perform **multi-stage verification** through numerical, unit-aware, and symbolic checks, Python recomputation, and independent re-solving.

TECHNICAL STRENGTHS

Programming

C/C++, Python, MATLAB, Verilog

Language

TOEFL after January 21, 2026: 5.0 (R:6, L:6, W:4, S:4.5), Mandarin (Native)

HONORS & AWARDS

Third Prize, Intel Cup Embedded System Contest, National Undergraduate Electronic Contest

Jul. 2026

Zhejiang Provincial Government Scholarship, Zhejiang Provincial Government

Nov. 2025

Outstanding Student for Academic Excellence, Zhejiang University (Awarded twice)

Oct. 2024 & 2025

Second Prize in Provincial Physics Innovation Competition, Zhejiang Physical Society

Dec. 2024
